# Web page: HTML/CSS

How to create web page through HTML & CSS functions

Jessica Keilla Samussone Chiponde

Scientific advisor: Ph.D. associated professor

Fakhertdinova D.I.

Web page development with: HTML & CSS

PORTFOLIO

What is a website

- Website is a combination between the words web (network) and site (place), that is, a website is a place on the network. It is the word used to define the place where one or more pages are available to be accessed through the internet.
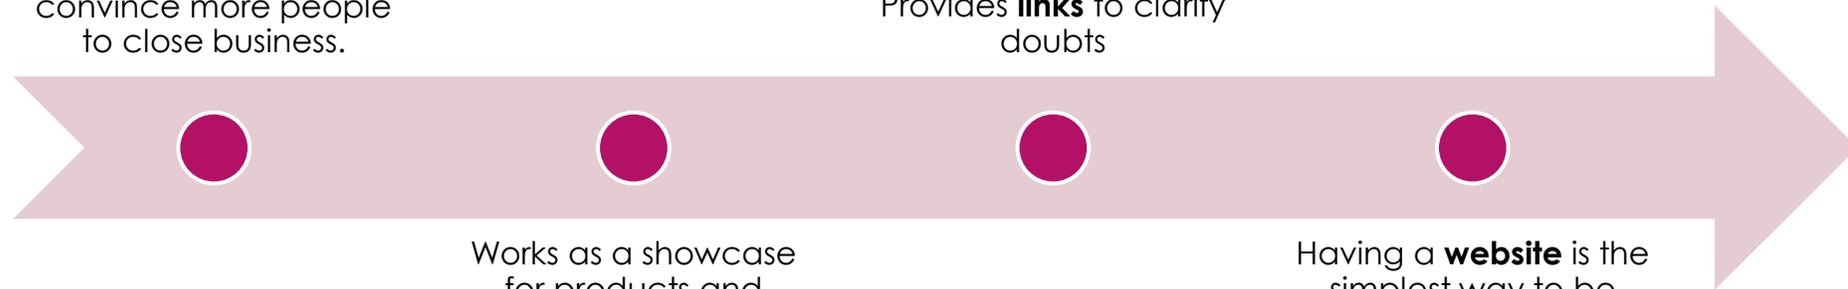

http://

Importance of the Website

A website necessary for companies to expand their **operations** and convince more people to close business.

Provides **links** to clarify doubts

Works as a showcase for products and services

Having a **website** is the simplest way to be found on the **internet** today.

HTML & CSS

▶ **HTML**

▶ Hypertext Markup Language — HTML is the foundational component of the web. This means that it allows the construction of websites and the insertion of new content, such as images and videos, through hypertexts.

▶ CSS

▶ CSS- is a style sheet language, also known as cascading style sheets. It is used for visual customization of a website. That is, they serve to optimize the content of the pages and allow a more user-friendly presentation.
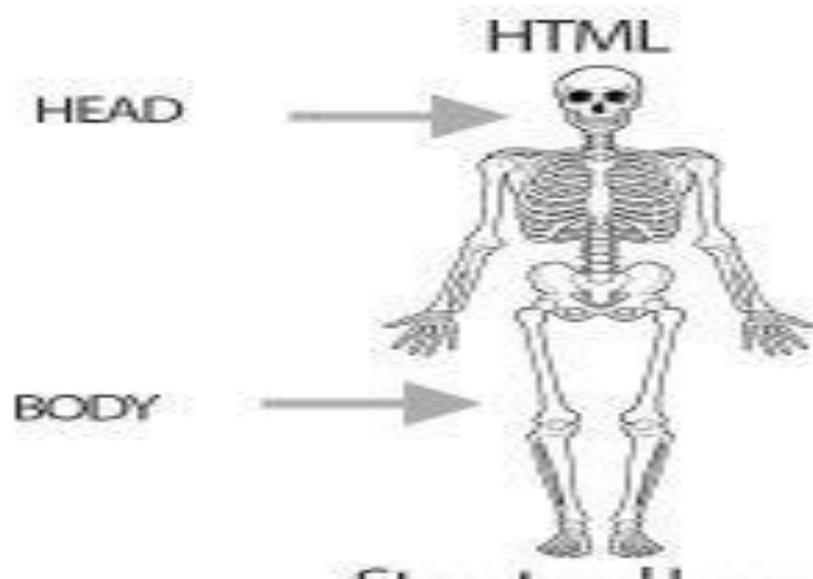

Difference between HTML & CSS

HTML

► Used to build the structure of the web page

HEAD

BODY

HTML

CSS

► used to define colors, fonts, sizes, positioning and any other aesthetic value for page elements.
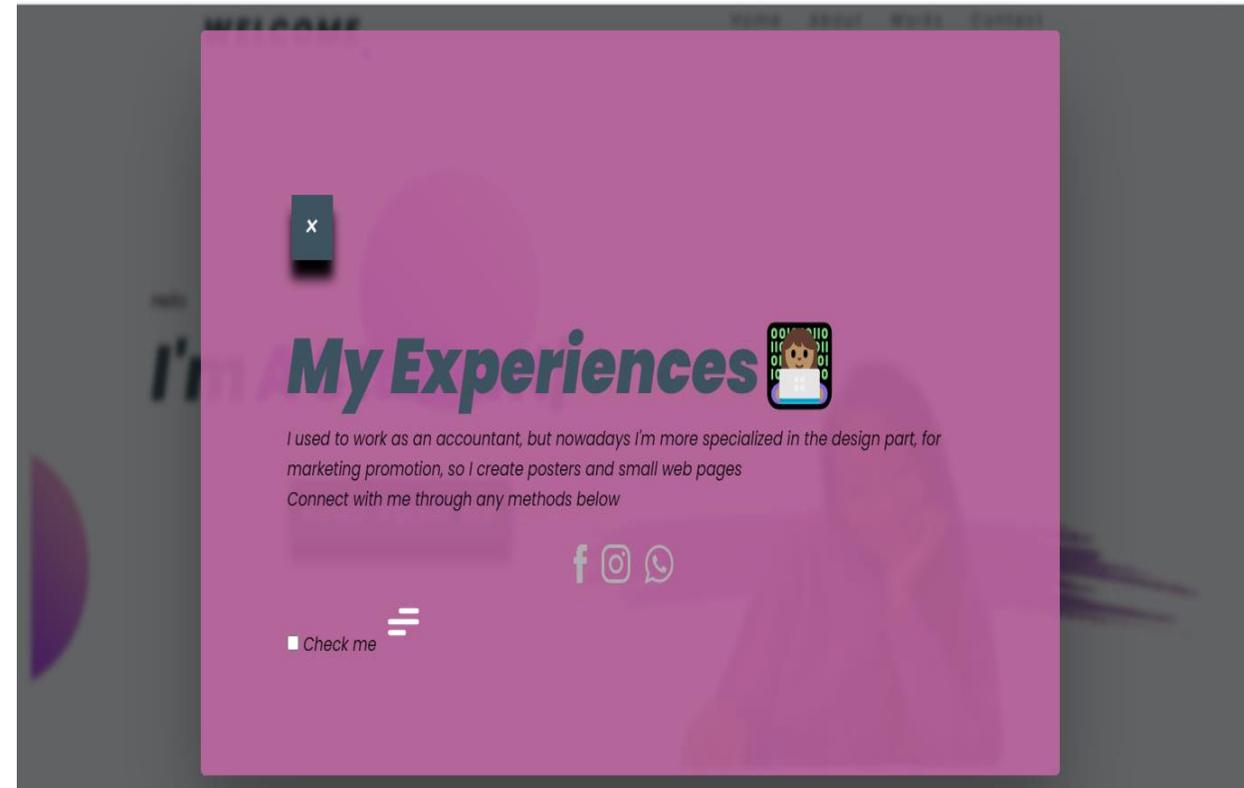

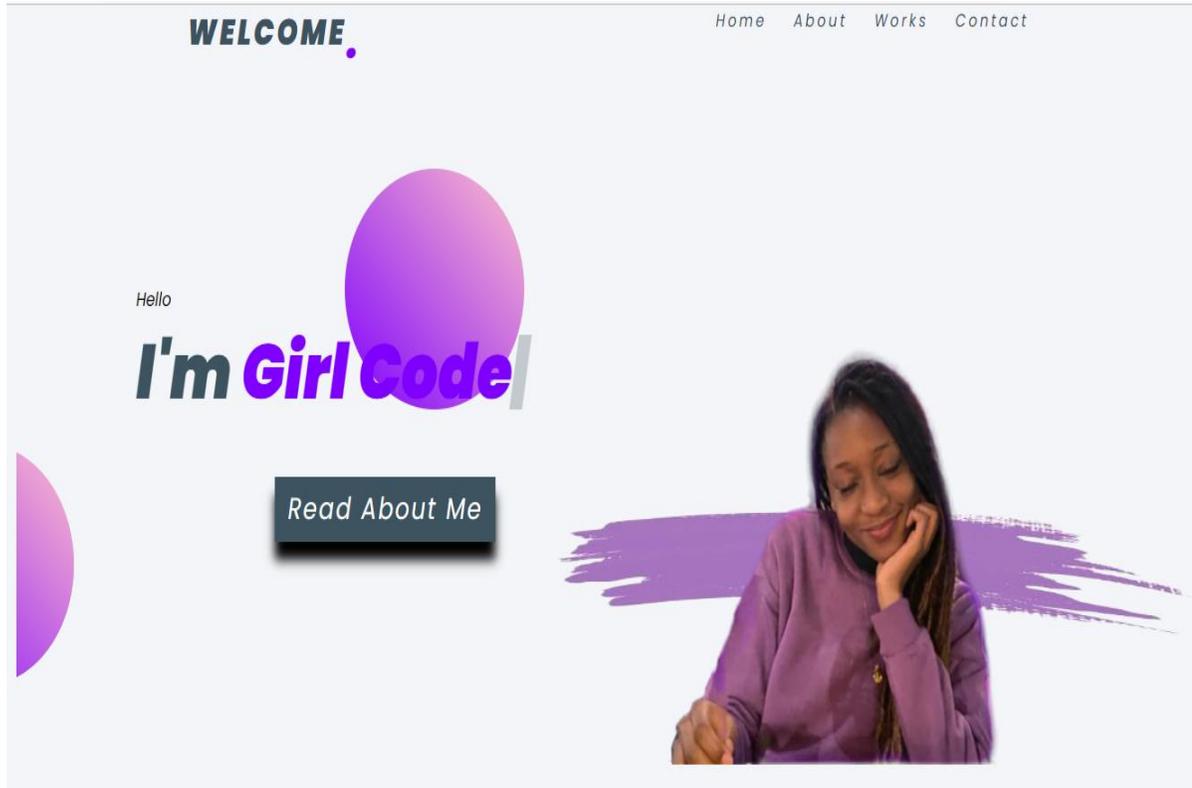

HTML with CSS

APPEARANCE

LOOK

Portfolio

-Portfolio is a list of works by a professional, company or student, in the case of educational environments.

-A portfolio is a very important tool to promote any career.

Portfolio

This is my web page

Coclusion

A portfolio is concrete proof of a professional's ability, or a student in which he explains his skills.

To create a portfolio gallery, we will only need HTML and CSS. We can also use JavaScript and much more....

Therefore, divide the entire article into two different sections in

-1st section, we will create the structure of the portfolio gallery (HTML)

 -in the second section, we will make the gallery look attractive(CSS).

 And that's how I created my work, I made the structure of the Website, the letters, images, icons and more through HTML

And in the second part I made the structure of the website look nice through CSS.

 So in my opinion CSS and HTML should always go together, because one complements the other for the design of a great website
